Birth Date: 02-22-2024

Commercial Bull

Tattoo: 4146

- Sire: DCF Power Line 1306, 680lb WW
- Large-framed Power Line son. Commercial bull.

These polled Ultrablack cattle combine environmental adaptability and maternal excellence of the Brangus breed with the exceptional marbling, calving ease and name recognition of Angus or Red Angus breeds. Like other composite breeds, Ultrablack cattle have a high level of hybrid vigor or heterosis that results in improvement in overall reproductive performance, growth rate, weaning weight per cow exposed, and optimization of mature cow size. Other convenience traits positively impacted by hybrid vigor generally include improvements in weaning rate, higher serving capacity, improved pregnancy rate, larger scrotal circumference, greater sperm production, and reduced age at puberty. Ultrablack sired calves meet and/or exceed industry standards for growth and performance in the feedlot phase. Additionally, these same calves maximize premiums in the packing plant because of their exceptional ribeye size and above average marbling scores.

AMERICAN ANGUS ASSOCIATION SELECTION TOOLS

Expected Progeny Difference (EPD), is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. Interim EPDs may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

PRODUCTION EPDS

Calving Ease Direct (CED), is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight EPD (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight EPD (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

MATERNAL EPDS

Maternal Milk EPD (Milk), is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

CARCASS EPDS

Carcass Weight EPD (CW), expressed in pounds is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling EPD (Marb), expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area EPD (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness EPD (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

Group/progeny (C Grp/ Pg and U Grp/ Pg) reflects the number of contemporary groups and the number of carcass and ultrasound progeny included in the analysis.

\$VALUE INDEXES

\$Value indexes, an economic selection index allows multiple change in several different traits at once pertaining to a specific breeding objective. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires if the sires were randomly mated to cows and if calves were exposed to the same environment.

Maternal Weaned Calf Value (\$M), an index, expressed in dollars per head, predicts profitability differences from conception to weaning with the underlying breeding objective assuming that individuals retain their own replacement females within herd and sell the rest of the cull female and all male progeny as feeder calves. The model assumes commercial producers will replace 25% of their breeding females in the first generation and 20% of their breeding females in each subsequent generation. Traits included are as follows: calving ease direct, calving ease maternal, weaning weight, milk, heifer pregnancy, docility, mature cow weight, claw set and foot angle.

Weaned Calf Value (\$W), an index, expressed in dollars per head, to predict profitability differences in progeny due to genetics from birth to weaning. The underlying objective being producers will retain 20% of the female progeny as replacements and sell the rest of the cull females and their male counterparts as feeder calves. Traits included are as follows (in no particular order): birth weight, weaning weight, milk, and mature cow weight.

Feedlot Value (\$F), an index, expressed in dollars per head, to predict profitability differences in progeny due to genetics for postweaning feedlot merit compared to the progeny of other sires. The underlying objective assumes producers will retain ownership of cattle through the feedlot phase and sell fed cattle on a carcass weight basis, but with no consideration of premiums or discounts for quality and yield grade. Traits contributing directly to the index are as follows: yearling weight

(gain), carcass weight and dry-matter intake.

Grid Value (\$G), an index, expressed in dollars per carcass, to predict profitability differences in progeny due to genetics for carcass grid merit compared to progeny of other sires. The underlying objective assumes producers will market cattle on an above-industry-average carcass grid. Traits included in the index are as follows (in no particular order): carcass weight, marbling, ribeye area, and fat.

Beef Value (\$B), a terminal index, expressed in dollars per carcass, to predict profitability differences in progeny due to genetics for postweaning and carcass traits. This terminal index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase and market these animals on a carcass grid. Traits included in the index are as follows: yearling weight, dry-matter intake, marbling, carcass weight, ribeye area and fat.

Combined Value (\$C), an index, expressed in dollars per head, which includes all traits that make up both Maternal Weaned Calf Value (\$M) and Beef Value (\$B) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and sell them on a quality-based carcass merit grid. Expected progeny differences (EPDs) directly influencing a combined index: calving ease direct (CED) and maternal (CEM), weaning weight (WW), yearling weight (YW), maternal milk (Milk), heifer pregnancy (HP), docility (DOC), mature cow weight (MW), foot angle (Angle), claw set (Claw), dry matter intake (DMI), marbling (Marb), carcass weight (CW), ribeye area (RE) and fat thickness (Fat).

ANNUAL BULL SALE
DOUBLE CREEK FARMS
AT THE FARM IN CLIFTON, TX ON NOVEMBER 7, 2025

SALE DAY PHONES: 254-749-3253 • 254-749-2240 • 254-749-4560

Sale at 12:30 pm at the FARM

AUCTIONEER:

Doak Lambert
972-839-6485

LIVESTOCK PUBLICATION REPRESENTATIVES:

Radale Tiner, *Angus Journal* 979-492-2663
Delvin Heldermon, *Heldermon Marketing Service* 405-205-1116
Deron Heldermon 405-850-5102
Phil Stoll, *Weekly Livestock Reporter* 817-831-3147

SALE LOCATION:

Double Creek Farms
5426 Highway 6, Clifton, TX 76634
We are located on the north edge of Clifton across from
Texas New Mexico Power, 30 miles West of Waco on
Hwy 6.

MOTELS:

Velkommen Inn
Hwy. 6, Clifton, TX (1/4 mi. from farm) 254-675-8999
Screen Door Inn - screendoorinn.com
Clifton, TX 254-675-7829

AIR TRAVEL:

DFW, 70 miles; Waco, 30 miles; Clifton, 3 miles

HERD HEALTH:

All cattle will be accompanied by proper health certificates
for immediate shipment. All bulls have been fertility tested.

DELIVERY AND DISCOUNTS:

We will give a 5% volume discount to buyers of 5 or more
bulls. We also offer free delivery for three or more bulls
going to one location, within 150 miles of DCF. Bring your
neighbor!

TERMS AND CONDITIONS:

All cattle are to be settled for sale day unless prior ar-
rangements have been made. The cattle sell under the
Terms and Conditions as suggested by the American
Angus Association.

FOOD:

A complimentary lunch will be served sale day. Refresh-
ments will be available throughout sale day.
